effects

# Food recycling in Wigan

# Solution overview

---

Component	Description
 Bin hangers	Tagged all black bins on a round with a bin hanger. Hanger had a message prompting people to request a new food caddy if they don't have one.
 Caddy info pack	If people ordered a caddy, they got an information leaflet and caddy sticker to tackle key information gaps.
 Email reminders	If people ordered a caddy, they are prompted to sign up for email reminders for a limited time after the caddy is delivered to encourage people to start recycling.

# Bin hangers

We want your food waste even if you only recycle a small amount

**Wigan**   
**Council**

Join the thousands of people in Wigan who already recycle their food waste

**Wigan**   
**Council**

Food recycling is easier than you think.

We can help you get started.

**Wigan**   
**Council**

# Bin hangers in action

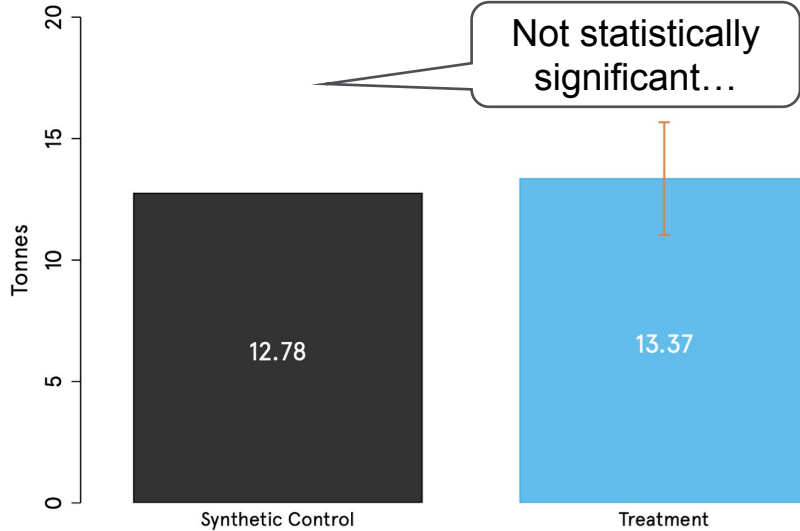

---

# Did we improve recycling rates?

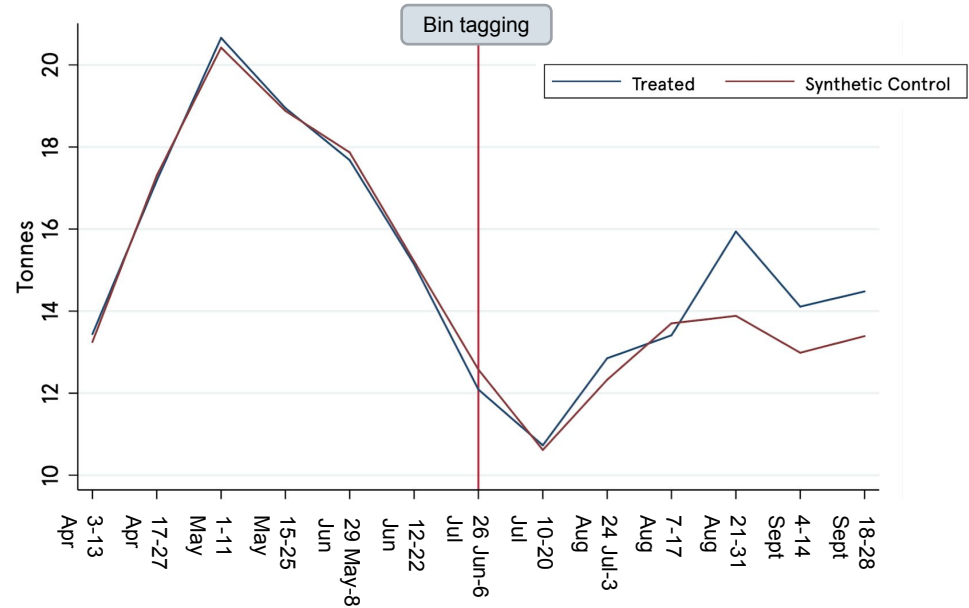

Weight of green waste recycled by round  
(tonnes)

Primary analysis

\*\* p<0.01, \* p<0.05, + p<0.1

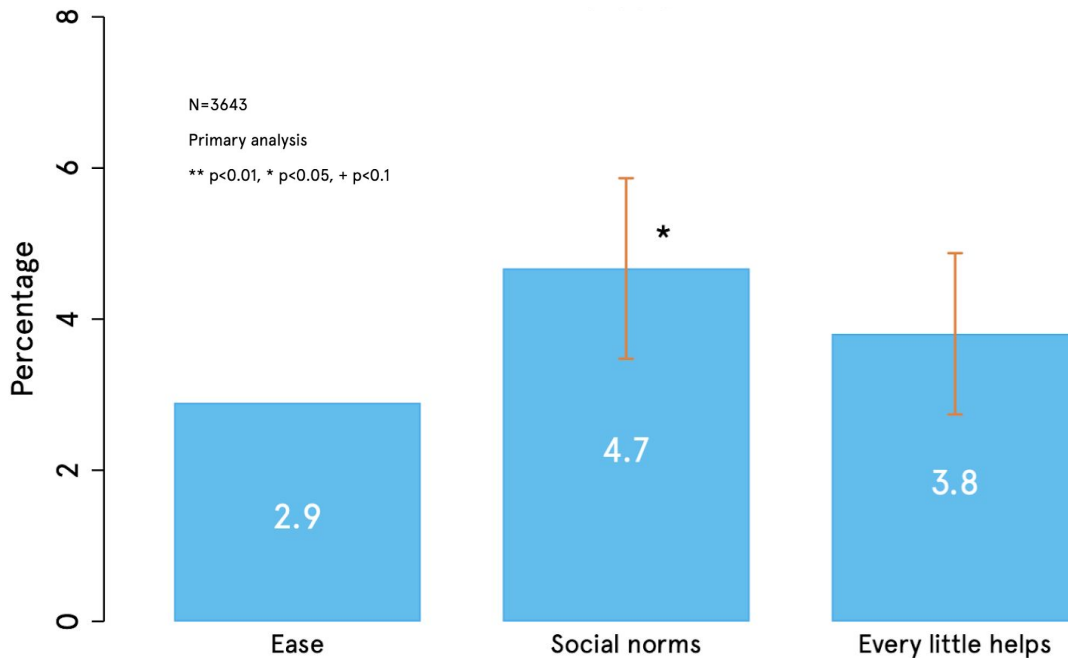

Weight of green waste recycled by round  
(average tonnes)

# Which hanger message was most effective?

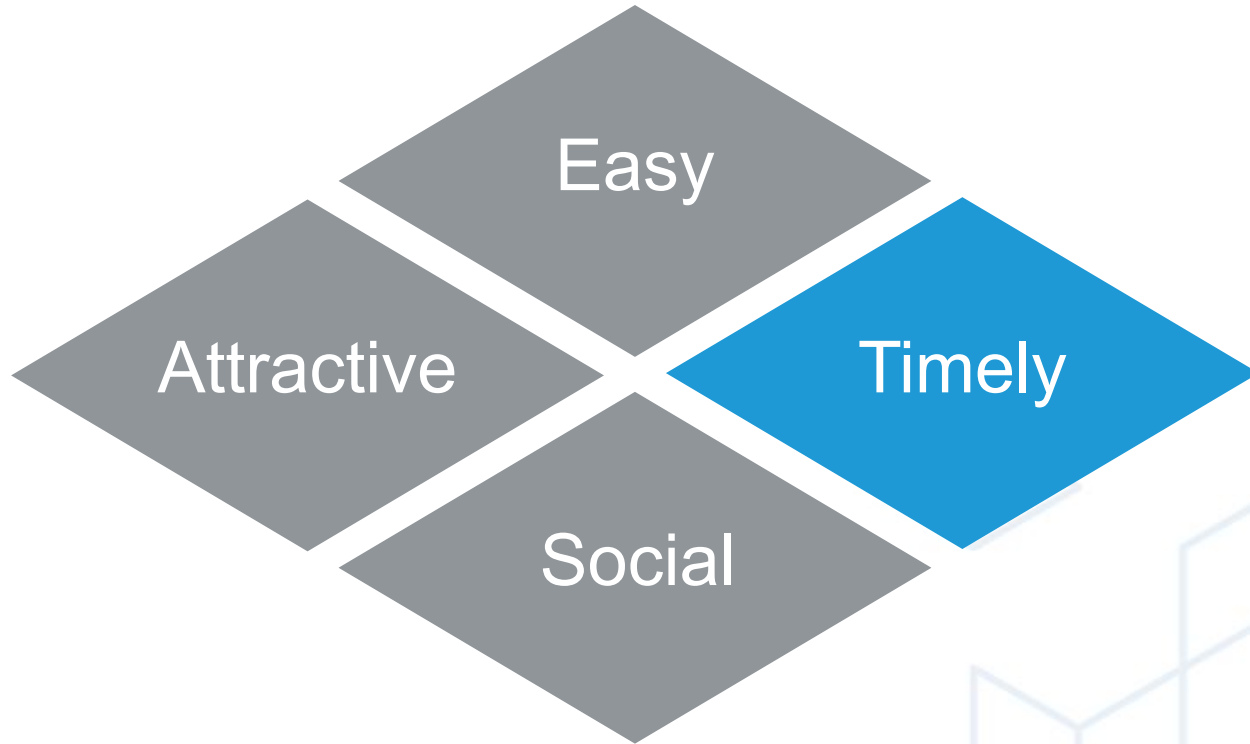

Rate of caddy orders by bin hanger message  
(% ordering a caddy through hanger URL)

# If you want someone to do something, make it...

---

## Make it timely

Consider the  
immediate costs and  
benefits

Help people plan  
their responses to  
events

Prompt people when  
they are most likely  
to be receptive

How can we encourage people to sign up to bike sharing?

# Pick a time when people are more receptive

---

Do people  
respond  
differently to a  
free transport  
voucher if they  
just moved  
house?

**BIKETOWN** 

**Haven't met BIKETOWN yet?  
Take a spin on us!**

Use promo code **NEIGHBORS2017** to get **FREE**  
BIKETOWN rides with either:

- 1 Free Day Pass
- 4 Free Single Rides, or
- First month free of an Annual Membership

**TO GET STARTED**

- Read this card
- Find bikes near you using the BIKETOWN app  
(biketownpdx.com/app)
- Use the app to register using your promo code NEIGHBORS2017

## Pick a time when people are more receptive

---

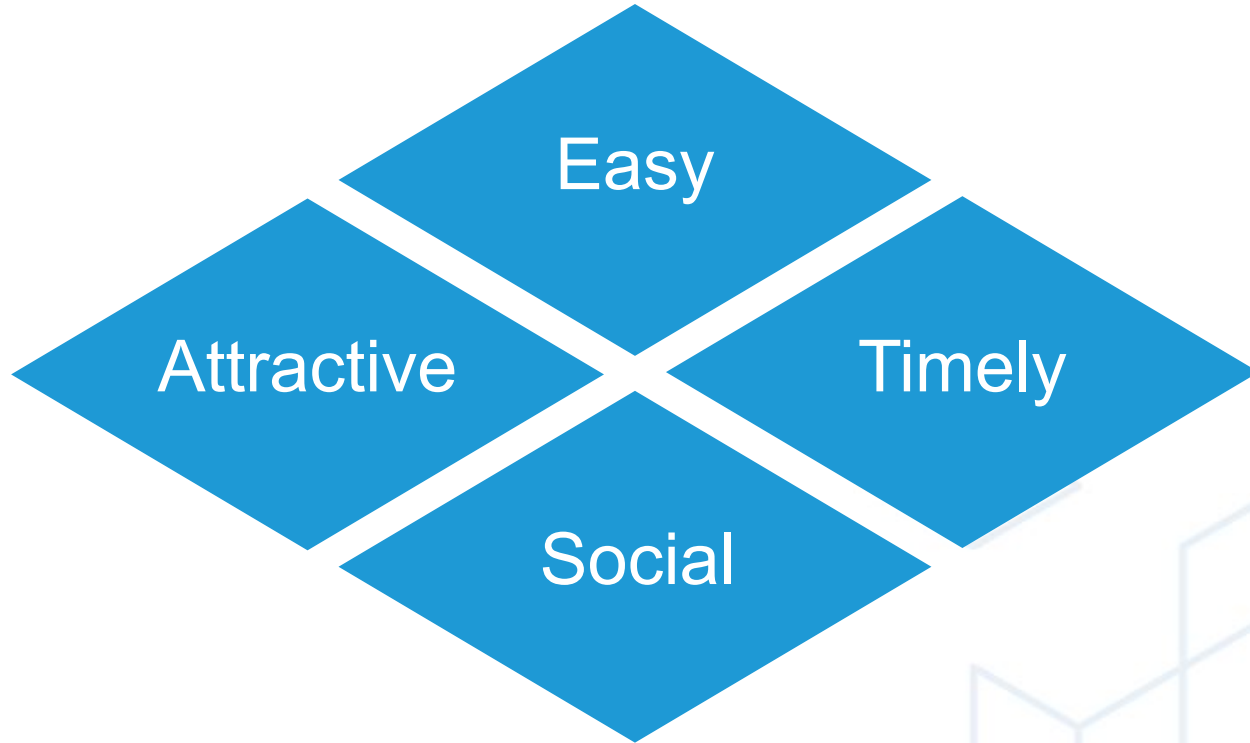

**Do people respond differently to a free transport voucher if they just moved house?**

**Yes! New movers were nearly four times more likely to sign up than those who lived near a new station, regardless of the message.**

# If you want someone to do something, make it...

---

# Our approach to solving a problem

---

# The TESTS Methodology

---

## Target

Narrow the focus to a specific behaviour that you want to change

Set specific behavioural goals

## Explore

Understand the system in which existing interventions are delivered

Understand the perspectives of the end-users

## Solution

Draw from the insights gained in the explore phase and behavioural insights to deliver policy solutions that encourage the target behaviour

## Trial

Use robust scientific designs and statistical methods to investigate whether, and by how much, the policy encourages target behaviours

## Scale

Scale up policies and interventions that have proven to effectively promote the target behaviour

# Judging evidence

# 'What works' is not always intuitive

---

## Steroids

- Used routinely for decades to reduce swelling with head traumas.
- Nobody ran an RCT until 2005

# Consensus and common sense can be wrong!

---

## Steroids

An RCT (n=10,000) found:

With steroids:

risk death = **26%**

or severe disability = **38%**

Without steroids:

risk death = **22%**

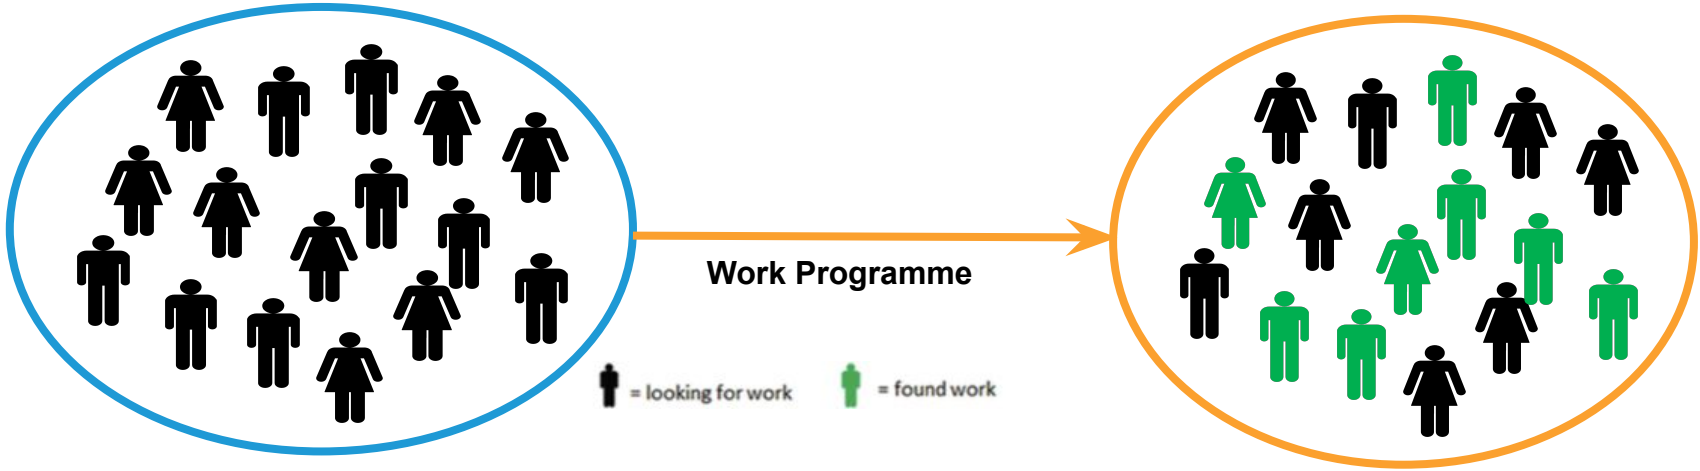

or severe disability = **36%**

# How can we find out what works?

... we could measure before and after our intervention?

# The Importance of Trialling - Before / After

You want **more homeowners to purchase flood insurance**. You run a campaign, **compare rates before and after**, and find a large difference...Success? Perhaps.

But what if **something else happened** in between? Was the increase due to your campaign, or would it have happened anyway? **You don't know!**

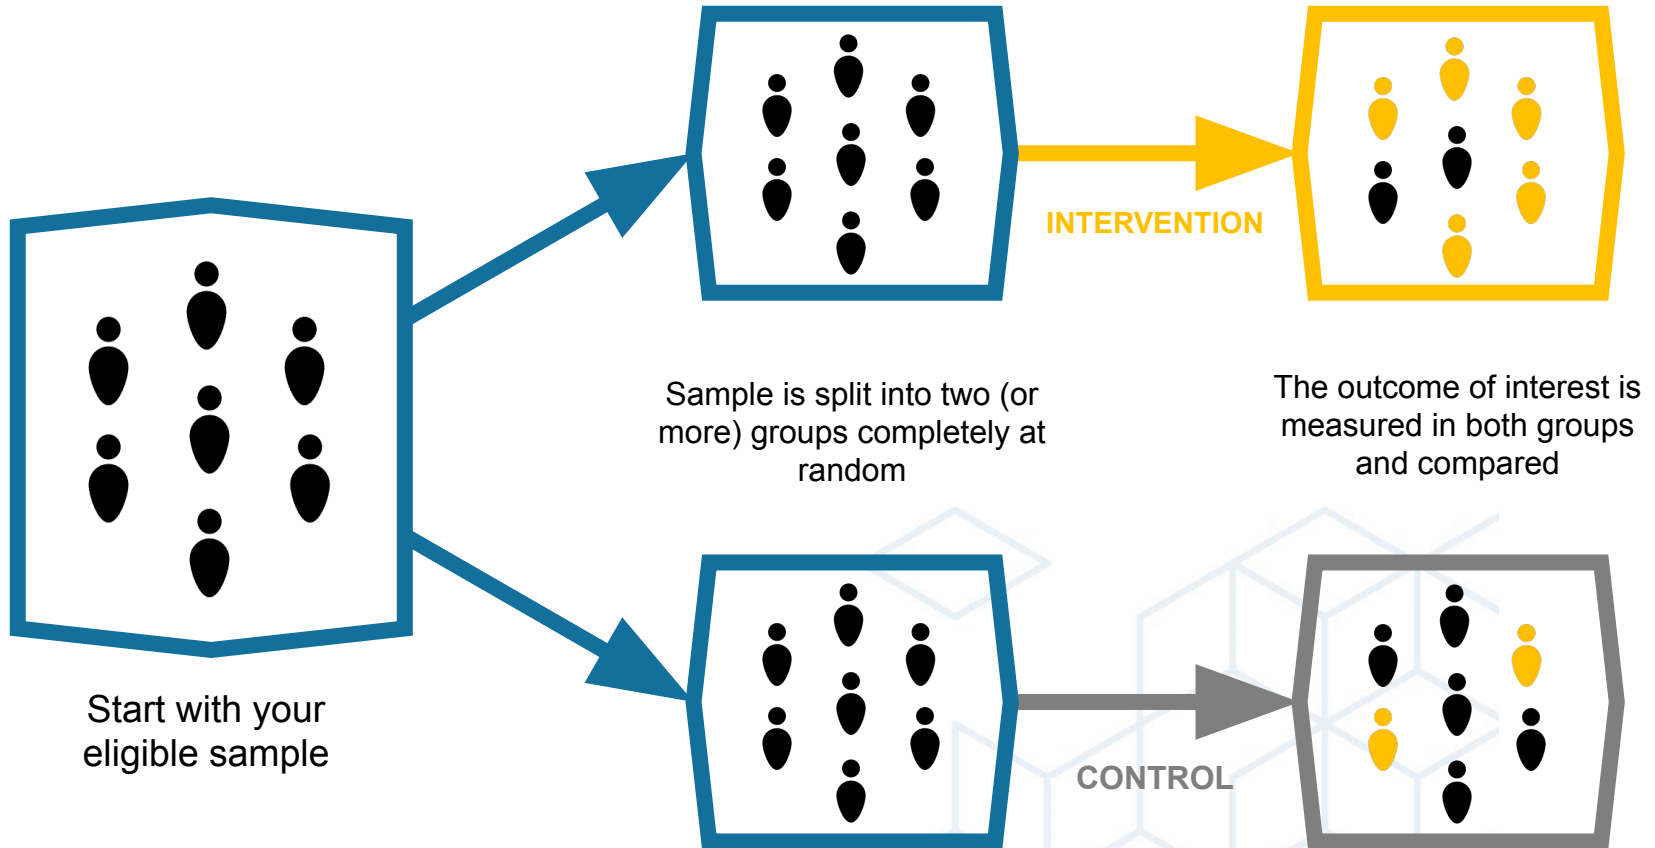

How much of this increase was due to the intervention?

How much was due to more people being more aware of the dangers of flooding since its been in the news?

# Randomised Controlled Trials

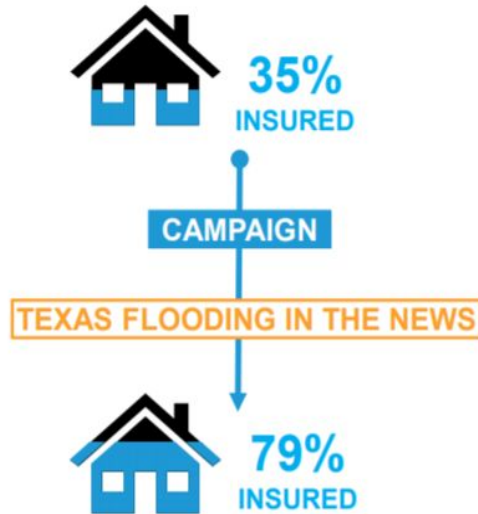

# The Importance of Trialling - Before / After

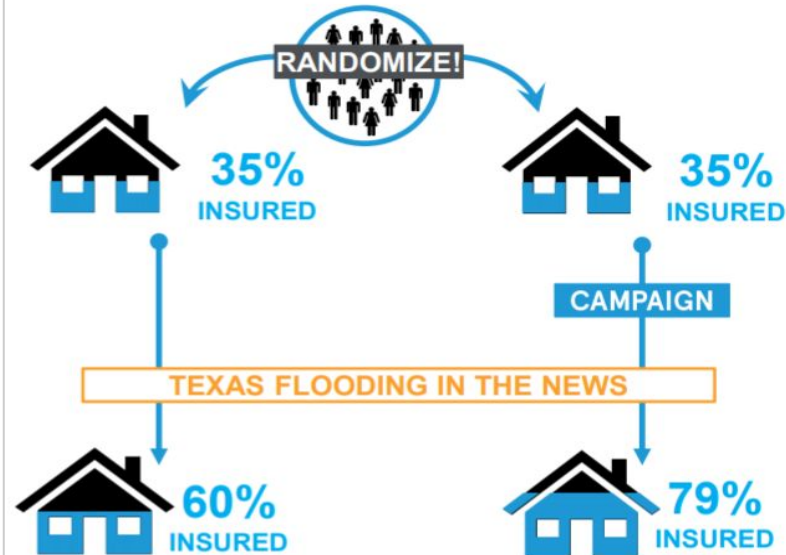

You want **more homeowners to purchase flood insurance**. You run a campaign, **compare rates before and after**, and find a large difference...Success? Perhaps.

But what if **something else happened** in between? Was the increase due to your campaign, or would it have happened anyway? **You don't know!**

**Randomisation can tell you!** Both groups start out the same, and **both are exposed to the same events**, so the difference between groups is likely due to the campaign.

# Rules of thumb for assessing evidence

---

**1. What would have happened if we hadn't intervened?**

*Do I have a control group?*

**2. Is the control group similar to the group receiving the new approach?**

*Remember that this is not just about demographics. Geography, timing or environment could all have an impact on results.*

**3. Am I sure the change is not just due to chance, or other natural fluctuations in the data?**

*How many people have been through the new approach?*

*Remember that small samples are more likely to produce extreme results*

**4. Does the result look realistic?**

**5. Can I explain why I am having an impact?**

*What is the crucial ingredient and is it something which I can scale?*

*You may think your pilot is working because of a new working model. However, if staff had to volunteer to take part it perhaps you just have more enthusiastic people involved*

**6. Has anything else changed which could have affected the outcome?**

*For example, if I am trying to help people back into work, how is the economy doing more generally?*

**7. Have I changed behaviour or beliefs/attitudes?**

*Remember, beliefs or attitudes don't necessarily translate into action*

# Thanks for your time!

# Any questions?
